SUMMARY

FullStack Developer with 1+ years of experience building production web applications using React, React Hooks, and React Context for scalable state management, with a strong attention to detail in building intuitive interfaces that work across all devices. Skilled in Agile Software Development and Scrum methodologies, with hands-on experience in REST API design, JWT authentication, writing well-structured and testable code, and Git/GitHub-based version control.

SKILLS

Frontend: React.js, React Native, React Hooks, React Context, State Management (Redux, Context API), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Material-UI, Bootstrap.
Backend: Node.js, Express.js, RESTful API Design, Middleware, JWT Authentication, CORS, Rate Limiting, Error Handling
Database: MongoDB, Mongoose, Schema Design, Aggregation, Firebase
DevOps/Infra: GitHub, GitLab ,CI/CD (GitHub Actions), Vercel, Postman
APIs: HTTP, REST API Integration, JWT Authentication,context API
Practices: Agile Software Development, Scrum, Debugging, Logical Problem Solving, Performance Optimization, Software Development Lifecycle (SDLC)
AI-Assisted Development: Claude, ChatGPT, Antigravity, DeepSeek (used for code generation, debugging, and review)

EXPERIENCE

Freelance Full Stack Developer — Catalyst PSC (Catalysing Your Future) *May 1, 2026 – July 31, 2026*
Remote / Freelance

- Built an end-to-end PSC exam-coaching platform for a coaching center client, with a collaborator: a dual-portal (admin and student) web app, a React Native mobile app, and a shared REST API backend — now supporting 200+ active users.
- Designed JWT access and refresh token authentication with token rotation, SecureStore on mobile, and an Axios interceptor handling silent refresh and queued concurrent 401 responses.
- Made a deliberate architecture trade-off to serve video content via YouTube integration rather than direct storage, working within the client's budget constraints while reusing their existing video library.
- Identified a client-side scalability issue in the video-browsing screens (pulling up to 200 videos to build category previews) and redesigned it to fetch only 5 videos per category upfront, expanding via pagination only when a user views a full category.
- Built admin modules and student-facing dashboards, backed by a Node.js, Express, and MongoDB API.
- Stack: React, TypeScript, React Native (Expo), Node.js, Express.js, MongoDB, Railway.

Full Stack React Developer — UnaireSync *February 1, 2025 – January 31, 2026*
Remote

- Worked as a Full Stack React Developer on production-grade web and mobile applications using React, React Native, Tailwind CSS, Node.js, and MongoDB.
- Independently delivered a 3-page responsive product site (spectrumvisionary.com) for an electronics retail client — took the project from Figma handoff to pixel-perfect production build, working closely with the design team, and optimized image- and animation-heavy sections for performance.
- Contributed to Node.js/Express backend functionality and MongoDB-backed application features alongside React frontend development.
- Collaborated in a 3-person team (with two peer developers) to build a React Native mobile app, primarily owning frontend development alongside one teammate while contributing some backend support.
- Participated in code reviews as both contributor and reviewer, identifying edge cases and validating logic before merge.
- Collaborated with cross-functional teams using Git-based workflows and Agile practices.
- Transitioned from intern to full-time developer.

Full Stack Developer Intern — Luminar Technolab *June 1, 2024 – December 31, 2024*

- Built and deployed full-stack applications using the MERN stack.
- Implemented CRUD operations & REST APIs.
- Collaborated on code reviews and followed agile workflows for deliverables.

PROJECTS

DietCraft
Personal full-stack project AI-powered diet and workout plan generator.

- Built an Express backend exposing rate-limited endpoints (`/finddiet`, `/generateworkout`) that call an LLM via an OpenAI-SDK-compatible client (OpenRouter), enforcing structured JSON-schema output with a graceful fallback when no API key is set.
- Built a 6-step React form wizard with live BMR/TDEE calculation and country/state-aware dietary preference filtering, rendering the AI's structured output as macro breakdowns and interactive workout plans.
- Stack: React, TypeScript, Node.js, Express.js, OpenAI SDK/OpenRouter

OPEN LIBRARY (https://my-project-coral-six.vercel.app/)

- A platform for users to upload, edit, and manage books with admin workflows, which is also responsive design.
- Stack: React, Node.js, Express.js, MongoDB

Chat Application (https://chatapp-rouge-one.vercel.app/)

- Real-time chat app with Google Sign-In, using Firebase Authentication and Firestore.
- Stack: React, Tailwind, Firebase

EDUCATION

Bachelor of Computer Application, BVM HOLY CROSS College, Cherpunkal 2024
